FRONT ACCESS SEALED VRLA MONOBLOC AGM BATTERIES

Capacities: 40AH to 250AH at C10

The extremely powerful, compact AGM batteries of EverExceed front access FT MAX Range are an ideal energy source for durability in Telecommunications and Electric Utility applications. The EverExceed front access FT MAX Range VRLA provides high performance and reliability in long duration discharge applications. Our development team combines the market's demand with design optimization, precision component selection and state-of-the-art manufacturing process to produce the most cost effective battery solution for today's applications.

Applicable Operating temperature range:

-40°C (-40°F) to +60°C (+140°F)

Ideal Operating temperature range:

+15°C (+68°F) to +60°C (+77°F)

Storage time from a fully charged condition:

12 months at 20°C / 68°F. For each 9°C / 15°F rise, reduce the storage time by half.

Applications

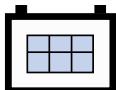

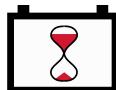

EverExceed FT Max range VRLA batteries Incorporate EverExceed's advanced VRLA technology designed for long life and high performance in:

Telecommunications

- Distributed Power
- Wireless \ PCS
- Cellular Radio
- Microwave
- Broadband

UPS

- Electric Utility
- Switchgear Control Power
- Communications

Innovative Features

- Thick optimized positive plate design for maximum service float life - 15 year design life @ 20°C(68°F).
- Nano-Carbon enhanced for improved durability.
- UL Recognized component.
- Valve regulated lead acid battery (VRLA).
- Extreme temperature High-Compression Absorbed Glass Mat technology (AGM) for greater than 99% recombination efficiency.
- Proprietary Fixed Orifice Plate Pasting technology applying active materials on both sides of the grid for consistent cell-to-cell performance, higher density & capacity and uniform grid protection.
- Advanced deep cycle high tin lead alloy, reduces grid corrosion and promotes long battery life.
- Over-sized, through the partition inter-cell welds provide low resistance connections, with minimal power loss.
- Flame arresting, low pressure safety release venting system for individual cells, recognized per U.L. 924.
- Reinforced special high temperature resistant ABS container and cover adopted.
- One-way relief valve, Explosion Resistant.
- Full 3-year free replacement warranty even temperature up to +60°C, 5+ years warranty optional.
- Better performance for high / low outdoor applications, extended service life for non-temperature controlled outdoor enclosures.

Designed in Quality Manufacturing:

Quality manufacturing processes for the front access FT MAX Range VRLA batteries incorporate the industry's most advanced technologies including: an automated sealing detection system, a computer controlled "fill by weight" acid filler, and a temperature controlled water bath formation process. Each and every unit is capacity tested.

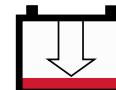

Standards and Compliances

- UL Compliant
- NEBS Compliant
- EUROBAT, 10+ year plus classification

- Tested in accordance with BS 6290 PART 4
- Belcore, TR-NWT-000766
- ANSI, TI: 330

No transport restrictions

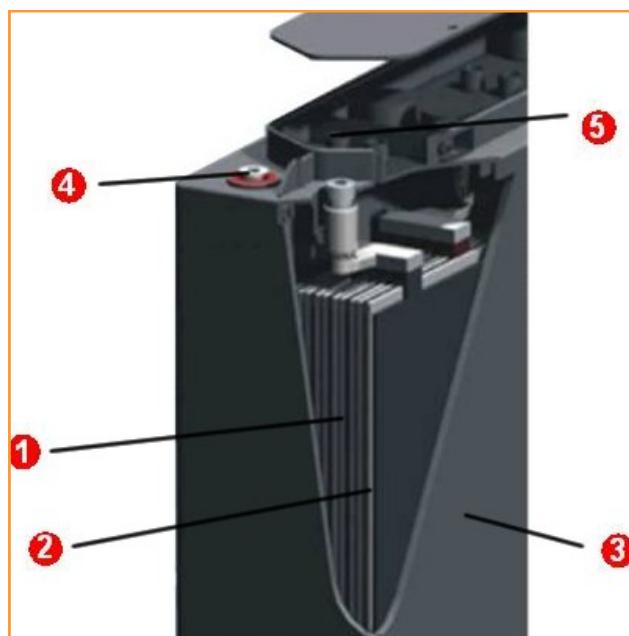

- Surface transport. Classified as non-hazardous material as related to DOT-CFR Title 49 parts 171-189.
- Marine transport. Classified as non-hazardous material as per IMDG amendment 27.
- Air transport. Complies with IATA/ICAO, Special provision A67.

CONSTRUCTION - The EverExceed's front access FT MAX Range VRLA battery construction is as shown in the diagram below. The positive and negative plates are cast from a Lead-Calcium-Tin alloy to reduce grid growth and corrosion. The active material is manufactured from high purity lead (99.9999%) to minimize the negative effects of impurities.

The EverExceed's front access FT MAX Range VRLA battery Separator is superior quality microporous mat of random woven acid resistant glass fibres, with high absorption and stability, which acts as sponge - soaking up and immobilizing the electrolyte whilst maintaining good acid to plate contact and availability during discharge. "U wrapping" is employed to eliminate the risk of short circuits due to mossing and debris at the bottom of the cell.

The purpose of the separator is to maintain a constant distance between the positive and negative plates, thus removing the possibility of short circuits whilst allowing the active material to fully react with the electrolyte. The random weaving also results in an open structure, which offers minimal resistance to the flow of electrolyte during filling.

- ① **Plates:** High Tin Pb alloy, optimized for high corrosion resistance.
- ② **Separator:** Highly porous glass micro-fibre separator, optimized for low internal resistance, for maximum Absorption of the electrolyte and for electrical separation of the positive and negative plates.
- ③ **Standard Housing:** Reinforced special high temperature resistant ABS container and cover adopted.
- ④ **Terminals:** Silver plated Copper female insert for easy and safe assembly and maintenance free connection with excellent conductivity
- ⑤ **Valves:** Release gas in case of excess pressure and protects the cell against atmosphere

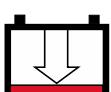

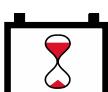

ELECTROLYTE FILLING - Special production and stringent QC systems are utilized to ensure the electrolyte saturation is optimized for each cell. Measured high vacuum acid fill, reduces electrical variability between cells. The battery design and construction negates the need for electrolyte addition and the battery remains maintenance free throughout its design life.

SAFETY RELEASE VALVE - The battery will operate above atmospheric pressure under normal operating conditions, however the maximum pressure is governed by the safety one-way release valve. Open is activated by pressures in excess of approx. 2 PSI (14 Kpa), resealing at approx 1.2 PSI (8.4Kpa).

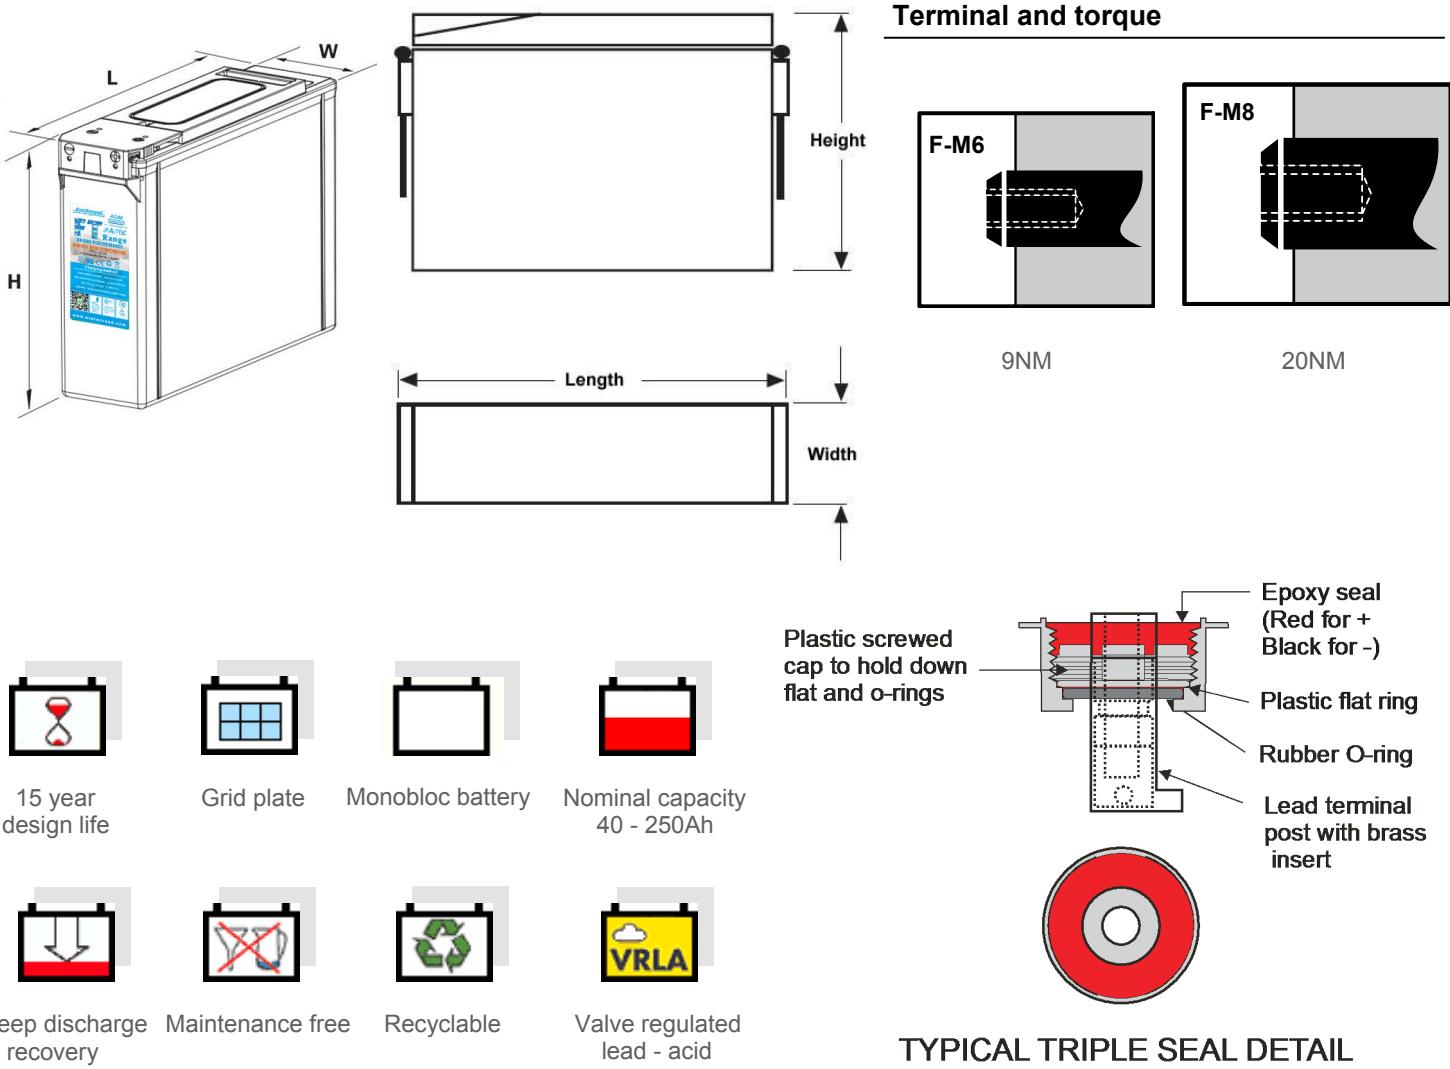

GAS RECOMBINATION - The gasses generated during normal operation of the battery are internally recombined. In fact more than 99% of the gas achieves recombination.

TERMINAL CONSTRUCTION - The contact quality between the insert terminal and the lead post is of vital importance during short duration / high Amp discharges. Elevated terminal temperatures are the result of poor contact, eventually causing seal degradation and electrolyte leaks. EverExceed's design and assembly technique for terminal casting ensures trouble free operation for the design life of the battery.

25%	2500
10%	5000

Float Voltage & charging

Constant Voltage charging is recommended

Recommended float voltage: 2.27VPC @ 20°C(68°F)

Float Voltage Range: 2.25VPC to 2.30 VPC @ 20°C(68°F)

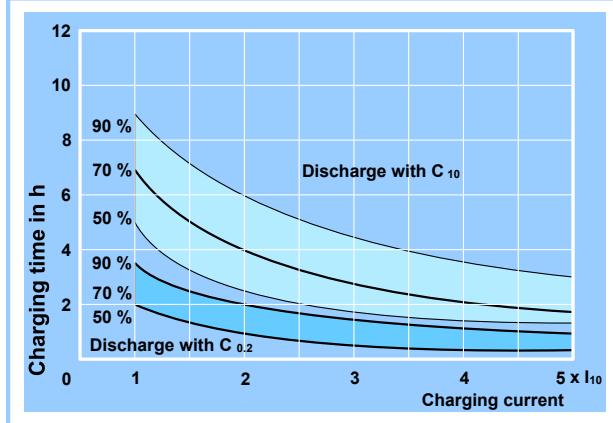

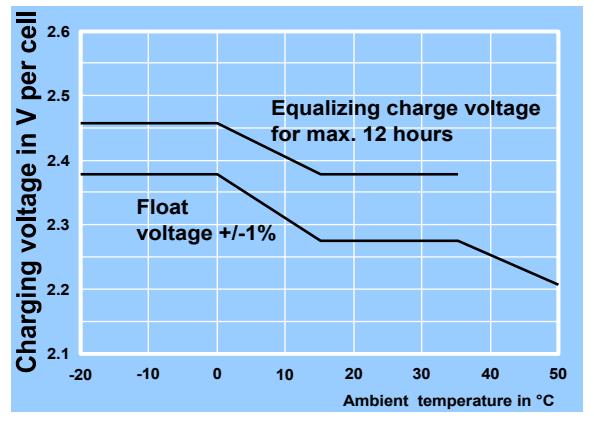

Equalize voltage: 2.35VPC for 12 Hours

Temperature compensation:

Apply for temperature range of 0°C / 32°F to 40°C / 104°F. Subtract

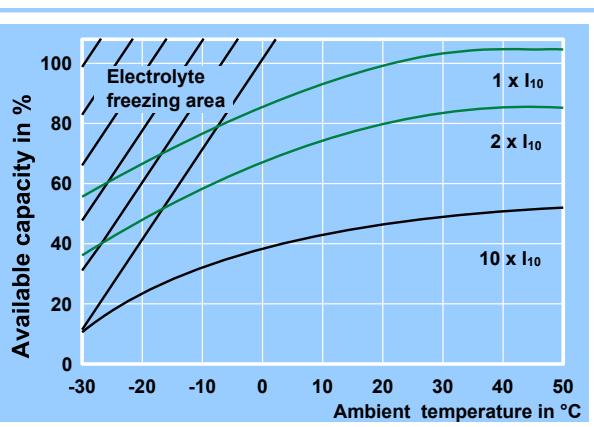

3 mV / °C / cell or 1.7 mV / °F / cell, above 25°C / 77°F.

Add 3mV / °C / cell or 1.7 mV / °F / cell, below 25°C / 77°F.

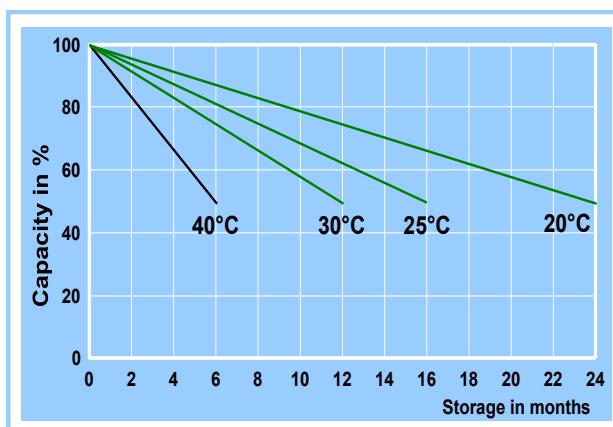

For charging 2.27 V/cell is recommended. The charging voltage

Recharging time in dependence of charging current (guide)

Extracted capacity in relation to the temperature.

Self-discharge in relation to the storage temperature.

EverExceed®
power your applications
